PROFESSIONAL SUMMARY

Bachelor's degree in Computer Science and Technology. **Nearly 15 years** of full-stack delivery experience. Recently **centered on Python and React as dual primary tracks**: Python for Web/APIs, automation, AI/data-side services, and tooling; React for admin consoles, dashboards, and marketing or product sites. Strong Java (Spring) and Node.js engineering as well. Comfortable owning the full lifecycle from requirements and architecture through coding, deployment, and operations. Representative domains: government big data, supply chain, international education SaaS, and LLM-powered applications.

Python stack & backend: Python, Flask, Requests, and REST APIs / JSON; data processing with pandas; business APIs, third-party integrations, data synchronization, and automation scripts. Integrate Dify, Ollama, and LLM services to support retrieval-augmented generation (RAG) knowledge bases and workflows. Hands-on experience with machine learning, image processing, and NLP projects. Additional backend skills include Java (Spring Boot / Spring Cloud), Node.js; MySQL (SQL tuning, transactions, locks, sharding), Redis, Elasticsearch, ClickHouse; Kafka / RocketMQ / RabbitMQ; distributed transactions; and ShardingSphere read/write splitting and sharding.

Python delivery from scratch to production: Experience taking Python services from requirements analysis and technology selection through Flask project initialization, module organization, dependency and environment configuration, and data structure and API design. Implement business endpoints and third-party integrations, integrate with React, then deploy through Docker / Nginx and maintain the application across AI, website, and business automation use cases.

React & frontend: SPAs and admin systems (React, TypeScript, Ant Design), integration with REST / GraphQL APIs and automation workflows; Vue, Element Plus, Tailwind; Electron desktop apps.

Platform & engineering: Linux, Docker, Kubernetes; GitLab + Docker + Jenkins style CI/CD; typical middleware and stacks (JDK, MySQL, Redis, ES, Nexus, MinIO, etc.).

Cloud platforms: Familiar with application deployment and day-to-day operations on **Huawei Cloud and Alibaba Cloud**. Experience configuring Linux cloud servers, deploying Docker services, setting up Nginx reverse proxies and HTTPS, backing up databases, and troubleshooting logs to support Python Web/API services and business applications.

Data & performance: Hadoop / HBase / Hive in real projects; Gatling performance testing.

AI & intelligence: Private Dify and N8n deployment and workflow design; Ollama and on-prem LLMs; agents with MCP; classical ML/NLP (e.g. classification, tokenization, model training). **1+ years of vibe coding**—pairing with AI (Cursor, Copilot, etc.) for rapid prototyping and refactors, with human review for maintainability.

Collaboration & language: **Fluent professional English**, including fully English remote work with teams in Singapore; **independently delivered from zero to production** the brand site Champ Code Academy (Python + React stack). English self-introduction video: upper right on https://chengqun2.github.io/

Open-source samples (personal learning / demos): Node on Linux, TypeScript / blockchain demo, Python Flask, Kubernetes example, React + Node; GitHub: https://github.com/chengqun2

STATUS Employed, open to opportunities	AVAILABILITY Within 2 weeks

WORK EXPERIENCE

Jiangsu Fangruan Technology Co., Ltd.

2023/6 — Present

Full Stack Developer (Python Backend / React Frontend)

50–150 employees · Private

Python services built from scratch: Own the process from requirements analysis and technology selection to production. Initialize Python / Flask projects, organize routing, business logic, and data access modules, and manage dependencies and environment configuration. Design data structures and REST APIs, implement endpoints, integrate with React, and deploy through Docker + Nginx, followed by log troubleshooting and ongoing iterations.

Python backend & AI applications: Use Python as the primary backend language to develop internal APIs, business logic, and AI services. Integrate Dify, Ollama, and model APIs such as DeepSeek-R1 to support RAG knowledge-base Q&A, with n8n connecting LLMs to internal and external business systems.

Data processing & automation: Write Python scripts for data processing, API integration, and operational tasks. Work with MySQL, ClickHouse, and Elasticsearch for data access and retrieval, and deliver complete business features alongside React admin interfaces.

Cloud deployment & operations: Familiar with deploying and maintaining applications on Huawei Cloud and Alibaba Cloud. Use Linux, Docker, and Nginx to deploy Python services and middleware, configure environments, troubleshoot logs, and handle routine operations. Deploy and maintain self-hosted Dify, n8n, and Ollama services.

Python stack: Python · Flask · Requests · REST APIs / JSON · pandas · MySQL · Dify / Ollama APIs · Docker / Linux

Shanghai Wayz Intelligence Information Technology Co., Ltd.

Full Stack Developer (Python Backend / React Frontend)

150–500 employees · Private

2022/7 — 2023/5 (10 mo)

Supported a Singapore-based children's coding education business through **fully remote collaboration in English**. **Independently delivered from scratch to production** the Champ Code Academy website using **Python + React**, covering backend APIs, frontend pages, deployment, and subsequent iterations.

Python backend built from scratch: Translated website and CRM requirements into a Flask project, setting up the module structure, routing, and environment configuration, then designing data interactions and REST APIs. Implemented business endpoints and Chargebee / Stripe subscription billing and payment integrations, completed integration with the React frontend, deployed the application, and resolved post-launch issues, covering the full process from project setup to business delivery.

Python automation & system integration: Wrote data synchronization and workflow-processing scripts, connecting CRM, billing, and marketing systems through Airtable, Make, and n8n. Worked with Supabase data services and used Jira for delivery and issue tracking.

Python stack: Python · Flask · Requests · REST APIs / JSON · Chargebee / Stripe APIs · Airtable API; React frontend

Nanjing Weishu Software Co., Ltd.

2017/12 — 2022/7 (4y7m)

Full Stack Developer

Listed · 150–500 employees

Developed **office automation, vehicle big data, integrated command, and sensor data platforms** for municipal and district public security bureaus. Focused on Java backend development, requirements analysis, database design, and core modules.
Worked with Spring Cloud / Spring Boot, Kafka, Hadoop / HBase, and Solr in high-volume data systems.

Youyin Information Technology Co., Ltd.

2015/7 — 2017/12 (2y5m)

Full Stack Developer

50–150 employees · Private

Handled requirements coordination, backend architecture, database design, API development, and **project management**.

Jiangsu Huasheng Hengye Technology Co., Ltd.

2011/9 — 2015/7 (3y10m)

Full Stack Developer

500–1000 employees · Private

Developed and maintained Java web applications, including a public talent services portal, Taiwan Glass ERP, State Grid office automation, and WeChat service-account backends.

PROJECT EXPERIENCE

Enterprise LLM Applications

2024/8-Present

Built Python / Flask AI services from scratch: analyzed Q&A and business integration requirements, initialized projects, organized routing, business logic, and data access modules, configured dependencies and runtime environments, and designed REST APIs. Integrated the React conversation and configuration interfaces and deployed through Docker / Nginx. Used Python to integrate Dify APIs and business logic. Built RAG knowledge bases with document chunking, embedding generation and storage, semantic retrieval, and reranking. Configured Dify conversation flows, published applications and APIs, and deployed MySQL, Dify, and local models such as DeepSeek-R1. Connected internal and external systems through n8n, extended functionality with AI agents and MCP, and handled log troubleshooting and ongoing iterations.

React Personal Website

2024/6-2024/7

Built a personal website with React, React Router, React Snap for static export, and GitHub Pages. Repository: https://github.com/chengqun2/resume . Live site: https://chengqun2.github.io/resume/

Node.js Backend Development

2024/4-2024/5

Developed REST APIs for scheduled tasks, MySQL CRUD operations, server status queries, and web scraping. Stack: Node.js, Express, mysql2, Sequelize, and pkg for packaging and distribution.

Electron Desktop Application Development

2024/2-2024/3

Developed an Electron desktop application with a main administration interface, message dialogs, notification settings, and application locking. Stack: Electron, Node.js, HTML, CSS, Axios for API calls, and electron-packager.

AI / Machine Learning

2023/12-2024/1

Worked on an automated police incident classification system for Yancheng public security. Developed Vue 3 / Element Plus web pages and Spring Boot backend APIs with MySQL. Trained a classification model on 2 million incident descriptions and categories using Naive Bayes and HanLP tokenization to classify incoming incidents.

Yancheng Public Security Sensor Data Platform

2023/6-Present

Developed the Vue 3 / Element Plus administration interface and Spring Cloud / Spring Boot APIs for portrait and vehicle data captured at monitoring locations across Yancheng. Kafka consumed 20 million records per day; Redis supported real-time traffic rankings at checkpoints; Elasticsearch stored data for personnel trajectory queries. Stack also included Oracle and MySQL with ShardingSphere-JDBC table sharding.

AI Face Recognition (Python)

2023/6-2023/12

Developed a Python application to identify people in captured photographs using the open-source face_recognition API: https://github.com/ageitgey/face_recognition.git . The workflow included grayscale processing, 16-by-16-pixel image blocks, and OpenFace-based 128-dimensional face representations stored for similarity comparison with newly captured images.

Champ Code Academy Website / Singapore EdTech & CRM

2022/8-2023/5

Independently delivered the Champ Code Academy website from scratch to production: https://www.champcodeacademy.com/ . Analyzed business requirements, initialized the Python / Flask project, organized modules and routes, configured environments, and designed REST APIs. Implemented backend endpoints, React pages and interactions, frontend/backend integration, deployment, and subsequent iterations. Supported the coding education CRM, Chargebee / Stripe subscriptions and payments, Airtable / Make.com / n8n automation, and customer service and marketing tools including WATI, ManyChat, and Meta. Worked with Supabase data services and Jira requirements and issue tracking, collaborating with overseas teams entirely in English.

Duty Staff Dashboard

2022/8-2022/9

Set up a Vue 3 application and implemented a large-screen dashboard displaying staff on duty.

FBABEE Supply Chain Management System

2022/1-2022/6

Developed backend APIs and a desktop web administration interface for inquiry orders, pickups, labeling, stock preparation, shipping orders, warehouses, finance, customers, suppliers, products, addresses, and carriers. Backend: Spring Boot, MyBatis, MySQL, Swagger, and Docker deployment. Frontend: React, Ant Design, Axios, TypeScript, and mock data.

Gomoku Backend API

2021/12-2022/1

Built the backend framework and APIs for a 20-by-20 Gomoku board. The user moves first; coordinates use {x:number,y:number} with a zero-based origin at the lower left. Five connected pieces horizontally, vertically, or diagonally win. Stack: Spring Cloud, Spring Boot, Spring Security, MyBatis-Plus, HTTPS, CORS, token validation, embedded H2, Swagger UI, and OpenFeign. Open-source technical demonstration: https://github.com/chengqun2/chess . Local Swagger UI: http://localhost:8066/swagger-ui/

Yandu Public Security Sensor Data Platform

2021/9-2022/7

Supported the public security prevention and control system for the Yandu District bureau in Yancheng. Responsible for requirements coordination, database design, and frontend and backend development.

Yandu District Public Security Integrated Command Platform

2020/10-2022/6

Developed an upgraded version of the Yandu Police Station integrated command platform.

Yancheng Patrol and Special Police Integrated System

2020/3-2020/10

Developed a Java web management system supporting intelligent patrol operations for the Yancheng patrol and special police division.

Yandu Police Station Integrated Command Platform

2019/7-2020/7

Developed modules for worklist management, internal assessment and performance appraisal, special operations for major events, command and dispatch, incident monitoring, community policing, law enforcement supervision, and intelligence analysis.

Yancheng Public Security Big Data Intelligence and Command Platform

2019/4-2020/10

Developed modules for priority monitoring, intelligence processing, and emergency command. Stack: Spring Cloud, Spring Boot, FreeMarker frontend templates, Kafka messaging, and Oracle.

Automated Deployment Platform

2019/3-2019/4

Built a visual deployment platform with Java, Shell, and Ant for Java services and web applications. Supported deployment from SVN / Git repository addresses, one-click code updates, real-time application status monitoring, start/stop controls, and log viewing.

Office Automation System

2018/7-2020/1

Developed a document workflow system for the Yancheng Municipal Public Security Bureau, covering drafting, department review, office review, secretariat review, and receipt by recipient departments. Used Activiti workflows with document withdrawal support and implemented email functionality using Postfix and Dovecot.

Personnel Relationship Analysis

2018/3-2018/6

Developed relationship analysis for the resident population for Yancheng public security. Stack: Oracle, Neo4j graph database, and Solr.

Vehicle Big Data

2018/1-2020/6

Worked on vehicle passage data queries for Yancheng public security, with 3 billion records and 8 million new records per day. Used HBase for storage and querying and PGIS maps for display. Data pipeline: Oracle -> Kafka -> HBase.

Aipai Artwork Auction

2017/1-2017/12

Developed a WeChat service-account artwork auction system covering bidding, order creation, payment, shipping, and receipt. Used Alibaba Cloud ECS, load balancing, MySQL, and Redis; Qiniu object storage; Spring Boot / SSM; H+ admin UI; QR codes; Shande payments integrated with UnionPay; HTTPS; and Yuntongxun SMS. Handled concurrency of up to 1,000.

CRM Management System

2016/7-2016/12

Developed customer information, customer pools, leads, opportunities, contracts, and product modules. Backend: JFinal, a Java web and ORM framework. Frontend: Avalon, Bootstrap, and jqGrid. Database: MySQL.

UMeeting Mobile Application

2015/7-2017/12

Developed an enterprise services app with Spring, Spring MVC, MyBatis, and a 200–table MySQL database. Implemented Redis-backed tokens with Jedis / Spring Data Redis; Baidu map and weather APIs; Alipay and WeChat payments; Alibaba business card scanning; and migration from Easemob to Tencent IM. Features included scheduled tasks, triggers, custom annotations and interceptors for authentication, Android version checks, GPS distance calculations, push notifications, registration SMS, Excel import/export, approval workflows, transactions, caching, and indexing. Deployed on Alibaba Cloud Linux servers with nightly database backups.

Smart Property Management

2015/7-2015/12

Developed a residential property management application and administration interface for community announcements, repairs, resident management, and payments. Backend: Spring, Spring MVC, and MyBatis. Frontend: EasyUI. Database: MySQL. Development tool: Eclipse.

State Grid Materials Management System

2013/6-2015/1

Developed a materials management system for the Yangzhou power supply company, including user roles, permissions, material categories, and workflows. Covered planning, purchasing, goods receipt, dispatch, financial review, returns, and inventory adjustments. Backend: Java, Spring, Struts 2, and Hibernate. Frontend: Ext JS. Database: Oracle, with PL/SQL Developer.

Yancheng Public Talent Services Portal

2011/9-2012/6

Worked on the Yancheng public talent services portal.

ERP System

2011/9-2013/7

Developed production and warehouse management functionality using Spring, Struts 2, Hibernate, and MySQL.

EDUCATION

Guangling College, Yangzhou University

Bachelor's degree · Computer Science and Technology

2007/9 — 2011/7
